

COLLECTION

2 0 2 1 / 2 0 2 2

You won't make a difference without true passion. Passion is the key essence to success. We at Vökl are shaped by our passion for the sport and the technology behind it. It is the formula for our never ending story of innovation and inspiration in the world of skiing until today.

Back then, we set out as avid engineers driven by German engineering virtues: Accuracy, attention to detail, perseverance, determination, ambition. Ever since, these virtues run through every single product we make. They have been passed down from generation to generation, since 1923.

To us, the label "Made in Germany" isn't just a promise but a responsibility. We work hard to honor it every day. At our main factory in Straubing, one of the world's most technologically advanced ski plants, classic handcrafting, engineering acumen and high-tech production equipment come together to produce some of the finest skis in the world: incredibly precise, forward-thinking and of unrivalled quality.

We are proud of our engineering skills. But our mission doesn't end here. Ultimately, we are skiers. We believe skiing is the greatest sport in the world. We want to enable people through the power of skiing. On skis we feel transformed. Literally and figuratively we distance ourselves from the confines of our stress-filled lives.

Skis bring us to our happy place. Whether that is adrenaline, competition or soul-riding. Whether that is neck deep in powder, upside down over the kicker, or on the hut's terrace. Skiing is our lifeblood.

MADE IN  GERMANY

**HIGHTECH
MADE WHERE
WE LIVE
AND SKI.**
BAVARIA, GERMANY.

TAILORED FIBER PLACEMENT

One of our latest technologies is Tailored Fibre Placement. In this innovative manufacturing process the new Tailored Carbon Tips are produced by embroidering the individual carbon fibers onto a carrier material.

This allows them to be positioned exactly along the stress lines, opening up completely new possibilities, for performance at the front of the ski, which has a decisive influence on the handling of the ski. The stiffness, torsion and thus the skiing characteristics can be specifically adjusted via the fiber thickness and millimeter-precise alignment. In this way, the fibers guide the dynamics to the areas of the ski where they are needed. The visibly integrated Tailored Carbon Tips are light, allow an agile shovel reaction with less effort and quickly build up energy. The Tailored Carbon Tips thus reach a new level of precision, direct tip response and active skiing pleasure.

TAILORED TITANAL FRAME

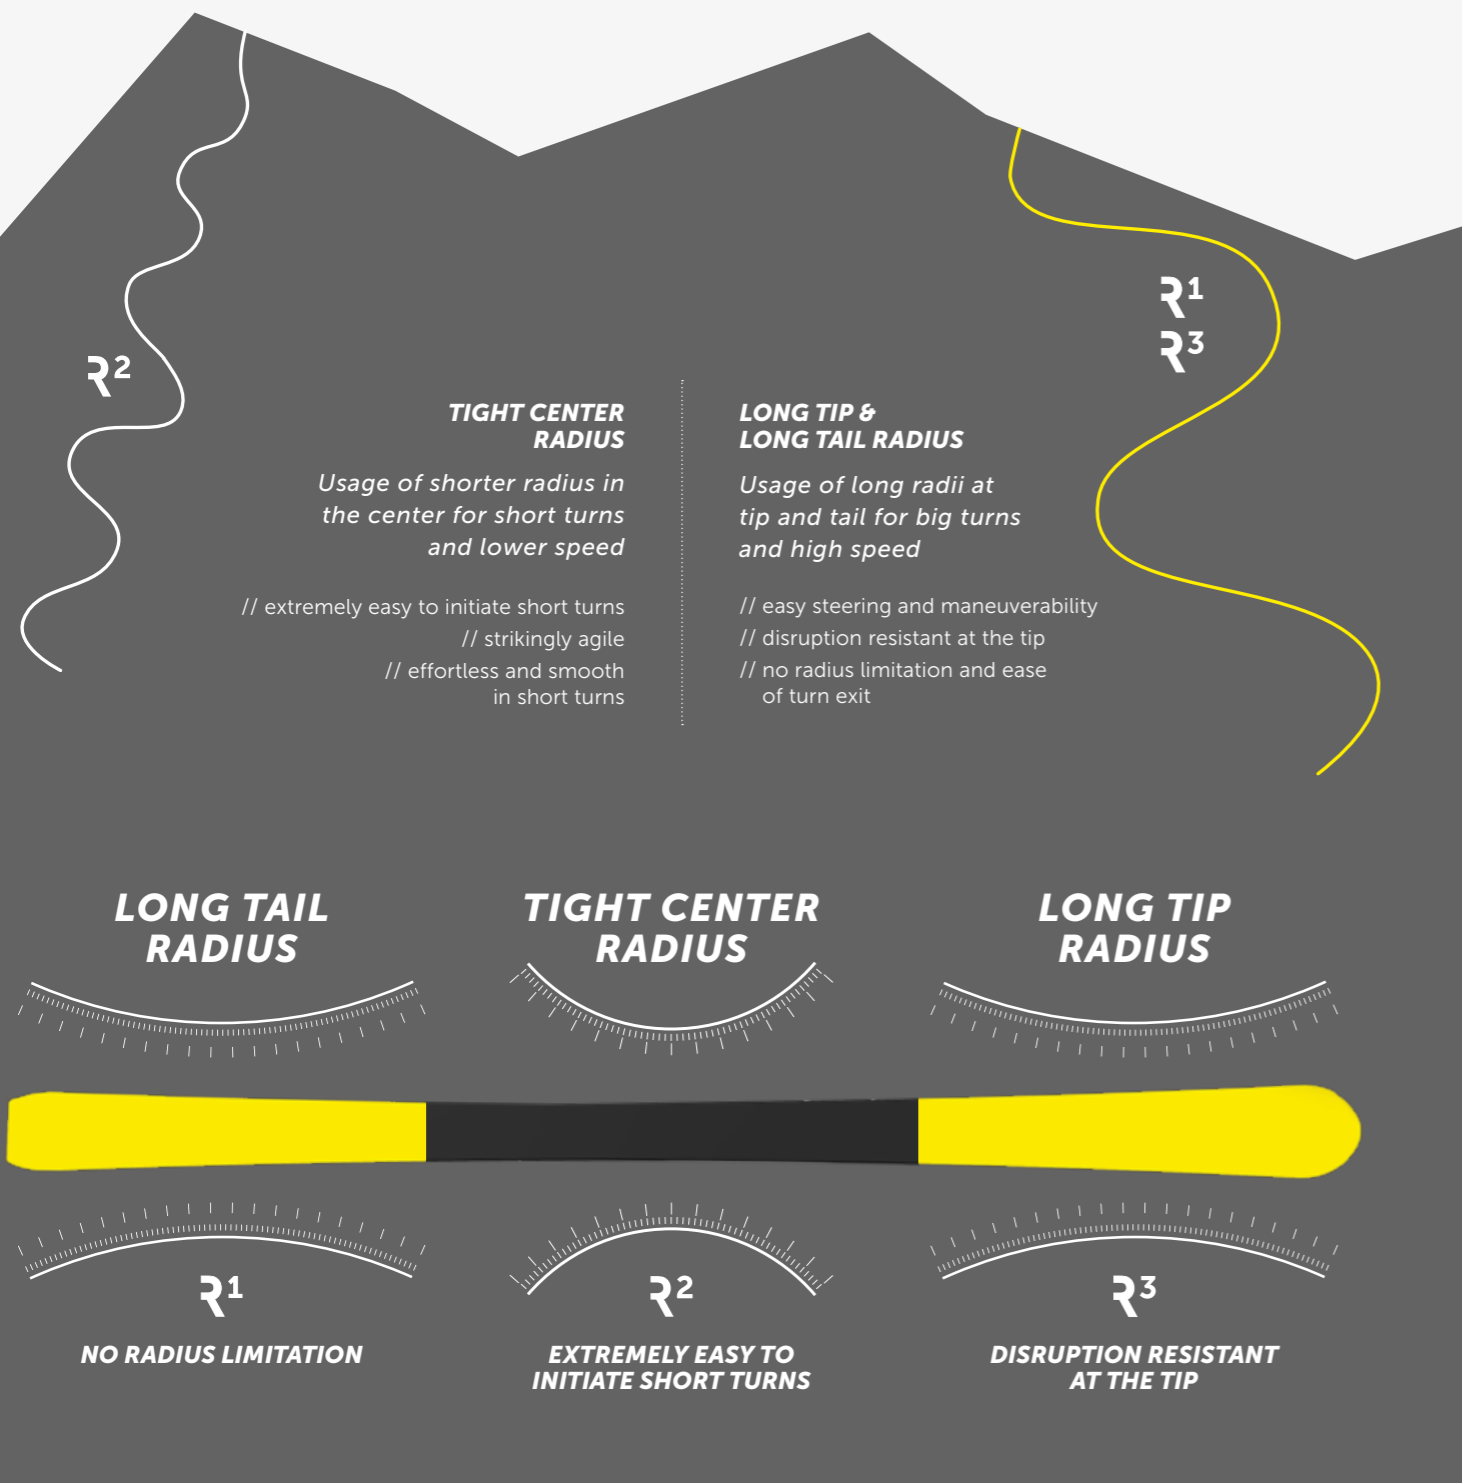

Our new key technology is called Tailored Titanal Frame.

In contrast to the previous design, the width of the titanal frame is now adapted exactly to each individual ski length. This results in Tailored Titanal Frames, which are positioned above the sidewall along the tip and tail area of the ski to provide the desired damping and torsional stiffness. The size of the frames is tailored to the skier's height, skiing ability and power. This means that longer ski models have a higher titanal content for more stiffness, more direct power transmission and stronger dampening. The shorter the length, the lower the titanal content, which makes the ski more agile, so that smaller, lighter and less powerful skiers can use the full potential performance of the ski. In addition to the Tailored Titanal Frames, a second, thinner titanal layer is located in the binding area, which gives the ski the necessary strength, but also agility. The result: the Tailored Titanal Frame technology provides an incomparable combination of agility and high speed control.

3D RADIUS SIDECUT

Three radii in one ski for maximum turning & speed versatility in all mountain skiing

ROCKER CONSTRUCTION

Our rocker construction is directly integrated into the production cycle, so the rocker shape doesn't need to be bent afterwards, which makes the matching between the rocker and the other components much more harmonized and precise:

- // easier turn initiation
- // effective edge length extends when putting the ski onto the edge
- // additional uplift for off-piste skiing

Full Rocker

Character: The ski is bent at a constant curvature along its entire length

Tip & Tail Rocker

Character: Bends up only in the shovel and tail zones, with a camber shape in the middle

Tip Rocker

Character: Only bends upwards in the shovel area, while the middle and tail of the ski feature a camber shape

ASH WOOD CORE

The high-quality core made of solid ash, which extends over the entire length of the ski, is a technical highlight that has great impact on the skiing characteristics.

The particularly elastic hardwood has so far only been used in racing skis for World Cup athletes and acts as an energy accumulator: while the ski flexes when initiating the turn, the fibers stretch and absorb the tension energy. At the exit of the turn, this accumulated energy is released, giving the ski enormous dynamics. Due to the specific stretching behavior of ash, the ski also adapts optimally to the surface. This results in the greatest possible stability and reliability, which makes the ski particularly smooth.

SMART SKINCLIP

The innovative Smart Skinclip system allows the ski tourer to decide for himself, depending on the situation, in which direction he should pull the skin on and off.

A standard snap hook at the tail end of the ski allows the skin to be attached and detached from behind. The skin can, however, also be pulled on and off quickly and easily from the front. This new flexibility is made possible by an elastic snap hook, which is also easy to grip with gloves. A subtle depression in the ski tip gives the hook lateral guidance and prevents it from unintentionally releasing the skin while walking.
